

Admin Page Infographic Manual

A visual quick guide for maintaining equipment, facilities, faculty profiles, public publishing status, and Supabase access for the Physics Program at Suranaree University of Technology.

equipment

faculty

facilities

public page

1 Who uses it

Approved SUT faculty and program managers who are listed as active editors in Supabase registry_admins.

2 What it controls

Shared records for equipment, facility clusters, faculty profile content, photos, public visibility, and exports.

3 What becomes public

Only verified public-ready equipment and public-ready faculty profiles appear on the published pages.

Start Here

This page is the shortest path from a new Supabase-backed admin account to records that can safely appear on the public website.

SIGN-IN REQUIREMENTS

Required: email user exists in Supabase Auth, email is active in registry_admins, domain is accepted, and the user knows their password. If using invite or recovery links, send a fresh link after URL Configuration is correct.

Security posture: admin.html is public as a file, but Supabase Row Level Security protects draft records, uploads, and editing actions.

! If invite email fails

Email rate limit exceeded means Supabase has paused Auth email sending. Wait for the quota to reset, configure custom SMTP for repeated onboarding, or create a temporary password and ask the faculty member to change it after first sign-in.

URL If invite opens localhost

Set Authentication > URL Configuration > Site URL to the published admin.html URL and add it to Redirect URLs. Expired links cannot be reused; send a new invite.

Admin Navigation Map

Each sidebar section owns a different part of the data model. Move through the page by task: monitor, create, review, publish, and export.

DAILY RHYTHM

Check Overview, clear Submissions, update Equipment and Faculty records, then export a backup after major changes. Use the public page link only after key records are Verified and Public Ready.

Creating and Reviewing Records

Equipment record

Identity, category, 800-character description, facility, room, custodian, email, research group, status, access, maintenance, safety, public-ready flag, feature photo, and gallery.

QA

Manager review

Submitted records should be checked for instrument identity, location, responsible person, access conditions, safety requirements, and public wording before approval.

PUB

Public approval

Set Review status to Verified and check Public Ready only when the record is suitable for the public infographic page.

Faculty profile

Name, title, email, owner login email, profile picture, biography, associated facilities, interests, highlights, activities, recognitions, and academic profile links.

Facility profile

Facility name, building, room, lead, color, and short description. Facilities act as the bridge between faculty and equipment.

BEST PRACTICE

Keep temporary wording honest: use phrases like location to be verified, faculty owner to verify, or details to verify until the responsible person confirms the record.

What Appears on the Public Site?

The public pages intentionally expose only records that are ready for visitors, collaborators, and faculty profile viewers.

AT Equipment Atlas

The public atlas displays verified public equipment. If the database has gaps, fallback atlas examples can remain visible. The admin can seed missing atlas records into Supabase without assigning faculty.

FP Faculty pages

All public-ready faculty profiles can appear even without equipment ownership. Faculty choose associated facilities; equipment appears through those facility relationships.

IMG Gallery images

Equipment feature and gallery photos are stored in Supabase Storage when configured. Public gallery thumbnails open full-size previews on click.

Rule of thumb: Draft and Submitted are internal. Verified plus Public Ready is public. Facilities may display publicly as directory records even before every equipment association is complete.

Supabase Troubleshooting

! Invite opens localhost

Set Authentication > URL Configuration > Site URL to the published admin.html URL and add the same address to Redirect URLs. Then send a fresh invite.

! otp_expired

The invite or recovery email is no longer valid. Send a new link and open it promptly.

! email rate limit exceeded

Wait for Supabase Auth email quota to reset, configure custom SMTP, or create a user with a temporary password.

! Blocked after sign-in

Confirm the email is active in public.registry_admins and ends with @sut.ac.th or @g.sut.ac.th.

! facility_ids missing

Run the latest supabase-schema.sql in SQL Editor, or add missing faculty columns and run notify pgrst, 'reload schema'.

! RLS insert error

The user is authenticated but not accepted as an active registry editor. Update registry_admins and rerun the latest is_sut_editor function.

WHEN IN DOUBT

Check Supabase Authentication logs, confirm URL Configuration, confirm registry_admins, and keep service-role or secret keys out of the public GitHub Pages files. The website should only contain the anon public key.
